Authentication and Limits

Notely is a fictional note-taking service used only to demonstrate technical documentation search. All requests to the Notely API must include an API key in the X-Notely-Key header. Keys can be created in the dashboard under Settings, then Developer.

The default rate limit is 60 requests per minute per key. When the limit is exceeded the API returns HTTP status 429 and the Retry-After header tells the client how many seconds to wait. Notes are created with POST /v1/notes and the maximum note size is 100 KB.
